

## **JOB DESCRIPTION – DATA ANALYST SOFTWARE ENGINEERING**

**Department: Tax roll - Software Engineering**

**Open Position: 1**

**Shift- Day**

**Job Title: Data Analyst (Data Pipelines & Cleansing)**

### **We are Looking for:**

- **2–4 years of experience in a data analyst or data engineering role.**
- **Strong SQL skills and experience with relational databases (e.g., SQL Server, PostgreSQL, MySQL).**
- **Hands-on experience with ETL tools like Airflow, SSIS**
- **Proficiency in data cleansing, data transformation, and profiling.**
- **Experience with Python or related profile.**
- **Strong analytical thinking and attention to detail.**

### **Key Responsibilities:**

- **Design, build, and maintain automated data pipelines to support business reporting and analytics.**
- **Perform thorough data profiling, cleansing, and transformation to ensure data accuracy, completeness, and consistency.**
- **Identify, analyse, and interpret trends or patterns in complex data sets.**

- **Collaborate with cross-functional teams (Operations, Development, etc.) to understand data requirements and deliver insights.**
- **Monitor data flow and address pipeline failures or data quality issues in a timely manner.**
- **Document data sources, data transformations, and process logic for reproducibility and transparency.**
- **Support ad hoc data analysis and reporting needs.**
